CPD reference number A008/016/03/2002

Continuing Professional Development Point Questionnaire

Accredited by the Wits CPD Office

1. Sepsis is the systemic inflammatory response to infection.
(a) true (b) false
2. Sepsis is caused by the activation of a single gene.
(a) true (b) false
3. Hypotension in septic shock is due increased vascular tone.
(a) true (b) false
4. In Sepsis surgery is an emergency not urgency.
(a) true (b) false
5. Community acquired sepsis should be treated with new generation antibiotics.
(a) true (b) false
6. The coagulation cascade is activated by cytokines.
(a) true (b) false
7. Pressure limit ventilation minimizes respiratory morbidity.
(a) true (b) false
8. Adrenaline is being used more often as the first line inotrope in septic shock.
(a) true (b) false
9. With neuropathic pain, the afferent tracts are in normal physiologic status.
(a) true (b) false
10. Allodynia has the effects of "pain on a touch" stimulus.
(a) true (b) false
11. Neuropathic pain usually derives from Ad-fibre mal-conduction.
(a) true (b) false
12. "Wind-up" happens in the dorsal horn with WDR cells as major component of activity.
(a) true (b) false
13. Glutamate is the most important neuro-transmitter in the dorsal horn with respect to the NMDA-receptor.
(a) true (b) false
14. When compared to CABG, angioplasty has a lower initial cost and results in longer lasting relief of symptoms.
(a) true (b) false
15. During OPCAB grafting, occluding a severely stenosed vessel (>90%) may lead to less severe myocardial ischaemia than a vessel with only 60-70% stenosis.
(a) true (b) false
16. Continuous cardiac output monitoring will reflect a change in cardiac output immediately.
(a) true (b) false
17. Atrial contraction may contribute to up to 50% of LV stroke volume during OPCAB surgery.
(a) true (b) false
18. Ischaemic pre-conditioning is more powerful than pharmacological cardiac protection.
(a) true (b) false
19. Children may become agitated after the administration of Midazolam.
(a) true (b) false
20. Chloral hydrate may cause airway obstruction in children.
(a) true (b) false
21. EMLA cream has very few side-effects.
(a) true (b) false
22. Nitrous oxide may cause nausea and vomiting.
(a) true (b) false
23. Ketamine may be given rectally.
(a) true (b) false

Instructions

1. Read the journal to find all the answers
2. Answer the questions and mark the answer form by putting an "X" in the appropriate square.
3. Make a photocopy for your records in case the form is lost in the mail.
4. Place the answer form in a envelope, seal it and send to:-
In House Publications
SAJAA CPD Points
PO Box 412748
Craighall
2024
5. **Do not register it and do not fax it, only original answer sheets are accepted.**
6. To get your CPD points subscribe to the SAJAA. See subscription form.
